House Price Analysis

Observations:

Most of the houses have 5-7 rooms above the ground floor.

Most of the houses are in 'average', 'above average' or 'good' classes.

There are some outliers on the scatterplot between SalePrice and GrLivArea.

There is some relation of LotArea with the SalePrice both by scatter plot and also by the correlation value

Inferences

Note that some of the features have quite high correlation with the target. These features are really significant.

Of these the features with corelation value >0.5 are really important. Some features like GrLivArea etc.. are even more important.
